

DALIA ORTIZ PABLO

MACHINE LEARNING ENGINEER

I'm a machine learning engineer with 3+ years of hands-on experience in applied machine learning, bridging research and real-world applications. Skilled across the ML pipeline — from data acquisition and model training to evaluation and deployment. Experienced in translating non-technical stakeholder ideas into feasible, cost-effective solutions and delivering clear, impactful presentations to both technical and non-technical audiences. Collaborative and curious by nature, with a track record of driving innovation in applied machine learning.

RELEVANT SKILLS

ML/AI: Regression, classification, deep learning, computer vision, large language models, multimodal models • **Programming:** Python, SQL, R • **Frameworks and tools:** TensorFlow, PyTorch, Scikit-learn, Pandas, NumPy, Jupyter, community cloud, Git, Spark, Hadoop • **Stakeholder Collaboration** • **Public Speaking**

WORK EXPERIENCE

Research engineer | CDHU, Uppsala University | Uppsala, Sweden

JUN 2022 - PRESENT

- Designed and deployed ML solutions across the full pipeline — from data acquisition and model training to integration into user-facing applications.
- Reduced ML pipeline setup time by 30% by introducing standardized engineering practices, improving scalability and cross-team collaboration.
- Partnered with technical and non-technical stakeholders to translate business needs into feasible, cost-effective ML solutions, ensuring alignment with both technical and budget constraints.
- Applied ethical, legal, and privacy considerations during data handling, model training, and deployment to ensure responsible and compliant ML solutions.

SELECTED PROJECTS

- **Handwritten Letter Analysis** – Engineered a multimodal ML pipeline combining LLMs and computer vision to digitize historical handwritten text, enabling large-scale translation and summarization.
- **Logo Detection in Videos** – Implemented an end-to-end ML pipeline (data collection → model training → inference) achieving 85% accuracy on imbalanced datasets, surpassing baseline performance.
- **Diffusion Model for Fair Face Generation** – Designed and trained DDPM models to generate realistic human faces; built a user interface for interactive inference, bridging research and usability.
- **Big Data Analysis for GitHub** – Designed and deployed a pipeline to collect and process repository metadata via the GitHub API, enabling large-scale analysis of developer activity and project trends.

EDUCATION

MSc in Data Science | Uppsala University

JUN 2022

- Recipient of King Carl Gustaf (Sweden) & Conacyt Regional Centro (Mexico) Scholarships, highly competitive awards granted to top-performing students.
- Thesis: Developed ensemble active machine learning methods for regression and classification to accelerate drug repurposing.

BSc in Mathematics | National Autonomous University of Mexico (UNAM)

OCT 2019

- Awards: National Mobility Scholarship for internship at the Center for Mathematical Sciences, UNAM.
- Thesis: Evaluated dynamic and statistical predictors of bifurcations in biological dynamical systems.

LANGUAGES

Spanish (fluent) • English (fluent)
• Swedish (Proficient) • Portuguese (Intermediate)
